Figure 1: A horizontal violin plot showing the distribution of difficulty scores for eight landmarks. The x-axis represents difficulty from 0 to 3. The landmarks and their median values are: AC (0.38), SPLE (0.72), PMJ (0.80), CUL (0.88), PG (0.92), RLVAC (0.94), RSAMTH (0.96), and LIGO (1.37). Below the plot, three green boxes indicate summary statistics: median 0.87 mm, 57% < 1 mm, and 82% < 2 mm. A caption at the bottom states: 'difficulty is landmark-specific — tutor and validator both read against it'.

the same millimetre, always read against how hard the landmark is

“Your AC sits 1.2 mm from consensus — the 94th percentile, where trained raters land within 0.38 mm. Re-check the midline: AC is where the commissure crosses it, not the bright bundle above.”
